Electrically Conductive Matting

Drains off static electricity, preventing damage to vulnerable equipment.
Available in $\frac{3}{32}"$ diamond plate or $\frac{3}{32}"$ smooth surfaces.
Tested to ESD-S7.1 1994 for surface resistivity.
Surface resistivity $10^6$ OHMS.

**DIAMOND PLATE**
A conductive runner with high profile diamond embossed top surface allowing traction from any direction. The surface sweeps easily and will accommodate rolling carts.

**SMOOTH**
This conductive runner matting is smooth on the top and the bottom.
